MODULE OVERVIEW

34 Modules, countless possibilities 32

Go configure

Design your bathroom exactly as you want it with Archimodule.

This new generation of stylish modular fittings enables you to configure your own unique solution, tailor-made to suit your needs and your space. Innovative technology guarantees a flawless look every time, even on unusual tile sizes and unevenly plastered walls.

Precise positioning on any tile pattern

The harmoniously designed modules adapt effortlessly to any bathroom tiling, thanks to a mounting rail concealed behind the rendering which allows the modules to be adjusted individually.

Perfect horizontal alignment

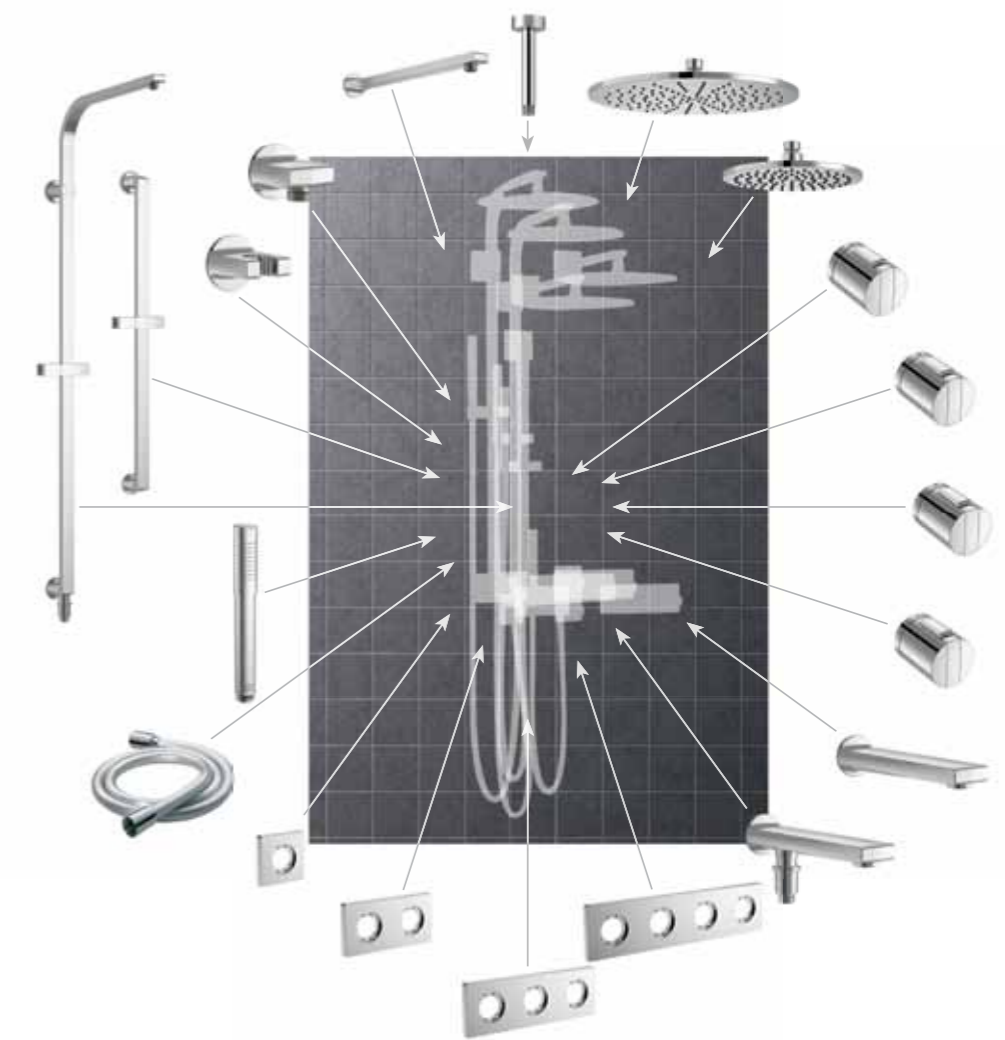

This ingenious system allows visible components to be lined up accurately for a neat, professional finish.

Flush-to-the-wall fitting
No unsightly gap – the telescopic function built in to the system's universal modules, with the option of additional spacers, ensures that components sit flat against the wall and project a uniform distance, so they look perfect from every angle.

Modular flexibility

Archimodule's pioneering modular concept offers complete design freedom. Select the components you require and position them where you like: there are countless possible combinations, so you can build a shower or bath system that matches your requirements exactly, from functionality to aesthetics.

Environment-friendly, safe thermostat technology

Ideal Standard's renowned thermostat technology does its bit for the environment by reducing water and energy consumption. It not only prevents scalding but also offers a high level of comfort, since the water temperature stays constant.

Assemble your ideal system using our online configurator at www.idealstandard.co.uk/archimodule

ELEGANT

Showering is pure pleasure with this stylish combination of a wall-mounted rain shower and a hand spray with wall bracket. The built-in thermostat allows precise temperature control, and because the showers each have their own flow control they can be used either separately or simultaneously.

For details of the modules shown, see pages 22–23.

This suggested arrangement reduces the design to elegant simplicity by allowing the bath to be filled via the overflow fitting rather than through a conventional wall spout. The bath filling and shower hand spray are separately controlled, enabling them to be used individually or at the same time, and the temperature is regulated by a top-quality, precision-engineered thermostat.

COMPACT

In this configuration a wall-mounted rainshower is paired with a shower rail with height-adjustable, pivoting hand spray for all-round comfort. Thermostatically regulated for safety and comfort, they can be operated separately or simultaneously using their respective flow controls.

For details of the modules shown, see pages 24–25.

This smart, compact bath solution features a bath spout with an integrated diverter that switches the flow to the hand spray as required. Our thermostat keeps the water safely at the desired temperature.

LUXURIOUS

This sophisticated example, with both rainshower and hand spray attached to the water-bearing shower rail, provides a touch of luxury. Separate flow controls mean the two thermostatically regulated showers can be enjoyed independently or simultaneously.

For details of the modules shown, see pages 26–27.

For luxurious bathing, try pairing a bath spout with a separate hand spray. Because there are separate flow controls for the water flow from the shower head and bath spout, the two options can be used individually or combined. A thermostat ensures accurate temperature control.

INDIVIDUAL

Tailored solutions

With Archimodule, the bathroom becomes a harmonious space in tune with your individual style. The collection's inspired modular design approach leaves you spoilt for choice, so enjoy the freedom to create a truly personalised oasis of comfort, relaxation and wellness within your home.

- Total flexibility
- Timelessly elegant design
- Flawless alignment

Decisions, decisions

What will it be: rainshower, hand spray or both? Wall or ceiling connection? Perhaps you'll opt for a water-bearing shower rail. Where space is limited, you could consider combining a shower with your bath – which in turn can be filled either through a wall spout or via the overflow. If you're looking for choice, choose Archimodule.

INDIVIDUAL

This shower concept exemplifies the scope and individuality of the Archimodule system. Rainshower and hand spray are combined on a single, water-bearing rail, and the water flow is diverted from one to the other as required. This configuration also permits the vertical arrangement of the temperature and volume controls. The system's thermostat takes care of optimum temperature control.

For details of the modules shown, see pages 28–29.

As you like it: this individual bath concept consists of a bath spout with an integrated diverter to switch flow to the hand spray as required. With the temperature precisely regulated by a thermostat, the result is a uniquely relaxing bathing experience.

ELEGANT

This Archimodule configuration for the washbasin, with thermostat and flow controls, provides high-level bathroom comfort and safety. Inbuilt protection against scalding is a key benefit of the precise temperature regulation.

For details of the modules shown, see page 30.

CLASSIC

Clean-cut, cohesive design

Archimodule's wall-mounted fittings work beautifully with washbasins too, so you can enjoy their stylish forms and superior functionality even when you're washing your hands.

- Timelessly elegant styling
- Flexible arrangement
- Impeccable alignment

CLASSIC

The time-honoured concept of separate hot and cold water controls has been redesigned to satisfy the most discerning modern customer. You can position the modules to suit your taste and the proportions of your washbasin.

For details of the modules shown, see page 31.

Perfect coordination

Whether you go for the classic system with separate hot and cold controls or invest in the convenient, ultra-safe thermostat option, your Archimodule washbasin solution will round off the design concept of your bathroom immaculately.

Assemble your ideal system using our online configurator at www.idealstandard.co.uk/archimodule

INSTALLATION

It's all in the detail

Easy, precise, time-saving installation – with flexibility built in.

That's what you can expect from Archimodule, thanks to the system's state-of-the-art technology and top-quality engineering. Create your dream design with ease.

Guaranteed waterproof

Every Archimodule assembly has triple protection against water penetration:

- Escutcheon seals
- A sealing sheet between the tiles and built-in units
- Rubber seals where pipes connect to the body of a concealed unit, to prevent water seeping into the wall

Innovative FAST-FIX features

- Protruding connectors to allow for easy push-fit assembly.
- Spirit-level support surfaces to aid alignment

A simple equation

+

+

= Your ideal solution

The ingenious mounting rail makes it possible to arrange your chosen modules quickly and accurately. It allows convenient pre-assembly of the components, which can then be fitted in the wall as one unit.

This unit, which houses the flow and temperature controls, is the foundation block of nearly every Archimodule configuration.

Most Archimodule solutions comprise a thermostat unit plus one universal unit for each function required. These are the only two flush-mounted units needed to create all the possible design permutations.

The simplified system makes ordering easy and leaves the design so flexible it can even accommodate last-minute changes.

Installation options

1. In the wall
2. On the wall
3. On supports proud of the wall

4. On the wall with a bracket
5. In a prefabricated bathroom or pod

Depending on the position of the installation, additional accessories may be required.

Installation depth

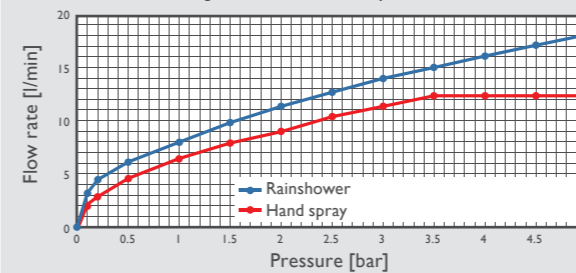

At just 78 to 95mm deep, Archimodule's flush-mounted units offer one of the shallowest installation depths available.

Fast connection

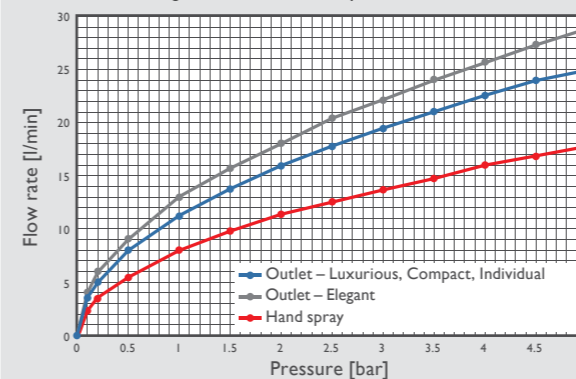

Brass push-fit connectors make joining the flush-mounted modules quick and easy. All the connectors you need are supplied with the units, along with a special tool to loosen them.

Flow rates

SHOWER – Elegant, Luxurious, Compact, Individual

BATH – Elegant, Luxurious, Compact, Individual

Uniform projection

The telescopic feature permits different installation depths of up to 17mm to be easily levelled.

Sorted

Even if things don't go quite right first time, there's an easy answer.

Problem: Installation too deep despite telescopic function

Solution: Extensions for surface-mounted elements

Problem: Hot and cold water connections reversed

Solution: Swap two existing components (possible even after installation)

Problem: Installation too close to surface despite telescopic function

Solution: Spacer plate

Problem: Cut-outs in tiles or wall too large

Solution: Larger escutcheons

Fixing set for mounting rail
- set consisting of 2 mounting feet
 - for installation projecting from the wall: in pre-wall installation, prefabricated bathroom units or bathroom pods

Guarantee

Our confidence in the quality and reliability of Ideal Standard products enables us to guarantee all mixers and taps for five years from date of purchase. Parts are guaranteed for five years and will be replaced if found to be faulty. The guarantee does not cover general wear and tear.

Our guarantee covers all products that have been used in the manner they were intended, and does not apply to any products that have been misused or abused in any way. Products must be installed and cared for in line with our fixing instructions and local water byelaws. The guarantee covers products in domestic use by the consumer and not in commercial or business use.

In the unlikely event the product fails within five years, we offer a free replacement or replacement part [or nearest equivalent]. Liability is limited to individual products and does not cover consequential loss or damage on installations. Applies to UK and Republic of Ireland only. This guarantee does not affect your statutory rights.

Ideal Standard pursues a policy of continuing improvement in design and performance of its products. The right is therefore reserved to vary specifications without notice. Colour reproduction is as accurate as possible within the limitations of the printing process.
