# Welcome...

to our 2013 edition of  
the Brassware Book.

Ordering your fittings from Ideal Standard  
couldn't be simpler, using one of the  
following methods:

Direct Sales:

**T: 0870 129 6010**

**F: 0800 590 943**

Contract Sales:

**T: 01543 413311**

**F: 01543 492216**

E-Mail Address

**thebrasswarebooksales  
@idealstandard.com**

**GUARANTEED  
NEXT DAY DELIVERY  
MONDAY TO FRIDAY**

**Order by 2pm & receive your  
products the next day.\***

\* For full terms and conditions,  
please see pg 264.

## Dedicated to excellence

Whatever you select from our extensive  
tap and mixer collection, you're  
guaranteed excellence in three areas:  
**design, performance and durability.**

**1** Led by Thomas Fiegl and Achim Pohl, the Artefakt design team produce products of simplicity, sensuality and a consistent ethos.

**2** Our unique CLICK feature encourages water saving – the user lifts the handle until they feel a slight resistance. This informs the user that the fitting is delivering only 50% of its maximum flow potential. Lifting the handle further enables the fitting to deliver maximum flow.

**3** All of our mixers and taps are made in Germany and Bulgaria and exceed European standards.

**4** Each product is produced with the best materials to be robust and hard-wearing.

### Award-winning design

At Ideal Standard, we put groundbreaking design at the heart of all that we do. We collaborate with Europe's most exceptional, award-winning designers such as Robin Levien, Artefakt and David Chipperfield, all of them skilled practitioners in form and functional design. They've joined our engineering team to create signature designs that set the trend in contemporary tap and mixer design.

### Brilliant performance

A mixer or tap that works perfectly is always our aim, whatever your system. Over the years, we've developed some very exciting technology to meet your changing needs. In fact, many of the great engineering advances in tap manufacture began life on the Ideal Standard drawing board. We manufacture products that give you maximum flow rates even in low pressure areas, products that are easy and safe to use whether you're 3 or 93, and products that deliver water efficiency so you can save money and do your bit for the planet.

### Built to last

Ideal Standard products are built to last; that's our guarantee to you. We know that you need robust, high quality mixers and taps that can withstand the day-to-day rigours of home life so everything we make exceeds British and European standards and is subject to extensive life testing. Manufactured most often in Germany, the home of engineering excellence, using high quality materials, all our products come with a comprehensive five-year guarantee.

I recommend the...

# An assurance of quality

Made in Europe, most often in Germany the home of engineering excellence, each and every Ideal Standard product is constructed from the best materials to be robust and hard-wearing. And because we believe in better, every tap and mixer is made to exceed both British and European standards.

All our products undergo exhaustive testing before they leave the factory. Everything from water pressure and temperature to noise levels are tested and retested. This is how we can guarantee you will enjoy faultless function and reliability.

At Ideal Standard, we have a firm eye on the future. Our highly experienced engineers are working with a number of German universities to educate and pass their skills onto the next generation of engineering talent. That's how we're paving the way for continued innovation in tap and mixer technology.

- 1 Block brass quality inspection
- 2 Brass polish test
- 3 Brass hand casting
- 4 Cast piece
- 5 Inspection of cast piece
- 6 Laser alignment for separation robot
- 7 Pieces on tombstone CNC processing
- 8 Inspection after mechanical processing
- 9 Preparation for chrome plating
- 10 Galvanic bath
- 11 Test bench
- 12 Chrome inspection

# Innovations to make your life easy

At Ideal Standard, we've perfected the next generation of mixers and taps ensuring you can enjoy unparalleled levels of comfort and control. Inspired by you and your family's needs, these innovations feature everything from technology that allows you to limit flow rates so you can save water and energy, to temperature control and Cool Body features for your comfort and safety.

## 1 - Fast Fix Bracket

Unlike competitor's fixing brackets which fit inside the wall so require internal access during their installation, our Fast Fix Bracket attaches to the outside of the wall. This offers a number of advantages:

- No requirement for internal access
- A more robust fixing
- No making good required
- All water connections are external (so less damage should water leaks occur, and much easier to fix)
- The bar valve sits no further from the wall than those with domed pipe covers

## 2 - Topfix - easy, speedy fitting

Designed to allow you to fit your mixer from above the basin rather than below, where space is traditionally tight, our TopFix system means installation is fast and easy. A matching bidet mixer is also available with the TopFix system.

## 3 - Save water and energy

Most of our products have water saving features built in. In fact, we were the first company to offer factory fitted flow regulators on our basin mixers. The ingenious CLICK technology in our single lever basin mixer and bidet mixer is designed to help you save water. Just lift the handle until you feel a slight resistance; this tells you you're getting 50% of the mixer's maximum flow. To achieve full flow, simply lift the lever to its maximum.

## 4 - Safety first for you and your family

It's only natural you put your family's safety first and now, with our Cool Body innovation, you'll never have to worry about fittings becoming too hot to touch. Not only that, our thermostatic control ensures you enjoy a safe temperature that's maintained at all times, whatever water's being used elsewhere in your home.

## 5 - Faster, more convenient bath filling

Idealfill fittings are separate from the filler so you can turn the water on and off from a convenient place on or around the bath while the water comes from a combined filler and overflow. So, no more stretching around the shower screen to turn your bath on. Idealfill delivers 23 litres of water per minute, faster than any other bath filling system.

## 6 - Easy temperature control

It's so easy to control water flow and temperature with a smooth, effortless handle featuring our pioneering ceramic disc technology. A single lever controls the pressure and temperature within a comfort zone of 30–45°C. So, you can limit water wastage and enjoy a more efficient flow rate – with no drips!

We've also developed a multi-port cartridge that enables even those with low pressure systems to enjoy a reliable, efficient flow. We've incorporated this technology into our one hole bath fillers too so you can match the single lever design of your basin mixer with your bath filler, without compromising performance. We're proud to say, no other company offers this design feature.

## 7 - Extra safety

Particularly important if you've got children, our temperature limit stop limits the movement of the handle when the tap is full on, so reducing the maximum temperature obtained. This can be preset in one of several positions for your family's comfort and safety.

# Jargon explained

## Ceramic Disc

The ceramic disc cartridge principle for bath, basin, bidet and shower fittings was developed by Ideal Standard and is the modern way to control water flow. There are no washers to wear and drip. A robust housing contains ceramic discs to control the flow of water through the fitting.

Ceramic disc fittings are all 'drip free' and impervious to lime deposit.

## CLICK cartridge

A feature in single lever basin and bidet fittings that encourages water saving. The user lifts the handle until they feel a resistance, which equates to a flow rate of 50%. Lifting the handle past this 'click' enables the fitting to deliver up to full flow.

## Combination boiler systems

Provide hot and cold water at mains pressure (minimum 1bar) meaning that 'High Pressure' fittings can be used. Some combi systems can give much higher hot water flow rates than traditionally UK gravity fed systems. These systems are easily identified by a lack of hot water tank, as hot water is produced instantaneously as required.

## Cool Body

Body is cool to the touch at all times to ensure safer use and prevent burning.

## Diverter

A shower diverter is fitted to all combined bath and shower mixer fittings. By operating the diverter, water can be directed from the bath spout to the shower handspray.

## Eco Button

Limits the flow rate to 50% to save on water usage, with a simple manual override to achieve higher flow rates.

## Flow Regulator

Factory fitted with a flow regulator to save water. Usually fitted to the outlet of basin mixers, the inlet to pillar taps or the inlet to a shower handspray. A flow straightener is also supplied with some fittings to replace outlet flow regulators when used on low pressure systems.

## High pressure

Products only suitable for installations with a high water supply pressure. This is a minimum of 1bar, but is often greater.

## Low pressure

The pressure in traditional UK gravity fed hot water systems depends on the height of the cold water tank (usually in the loft) above the water outlet and is usually less than 1bar. Typical pressures are 0.2bar for bath and basin filling and 0.1bar for showers on the first floor of a two storey dwelling. 'High Pressure' products are not suitable for use on low pressure systems as they would give poor flow rates. All products not marked 'High Pressure' are suitable for use on low pressure systems.

## Mixer fittings

Water from the hot and cold valves is mixed in the body of the fitting or spout to whatever temperature and volume is required by adjusting the handles on the valves.

## Monoblock mixers

These are one piece basin, bath or bidet mixers which incorporate the hot and cold valves and spout in one body.

## Multiport Cartridge

The Multiport Cartridge features 3 outlets (ports) for the out going water to flow through, inside the body of the fitting. This provides a greater water flow out of the tap, in comparison to an internal cartridge with a single port (outlet). Other benefits provided by the Multiport Cartridge are easy water and temperature control and a smooth and effortless handle control.

## Over rim supply bidets

Bidets for over rim supply are manufactured with one or three tap holes. A constant flow of clean water is provided for washing at a selected temperature.

## Pillar taps

Traditional separate hot and cold taps for baths and basins.

## Quarter turn

A ceramic disc cartridge that activates the water flow from off to fully on in just 90° of movement.

## Safety Stop

Limits the outlet water temperature to 40°C to protect vulnerable users. A simple manual override of the button located on the temperature control of a shower achieves a higher temperature.

## Sequential

Sequential taps use only one lever which controls water temperature. The water flow always starts at cold, reducing risk of scalding and ensuring a cold water purge.

## Single Lever

A simple lever action which controls both flow and temperature in one easy action and is universally popular throughout Europe.

## Temperature Limit Stop

Limits the outlet water temperature to a pre-set level. For manual mixers there are 7 settings (1 lowest through to 7 highest) which reduces the range of movement of the lever and therefore the amount of hot water that enters the fitting. For thermostatic mixers the maximum outlet temperature can be limited to 40, 43, 45 or 50°C, meaning that the fitting can be set (usually at installation) to protect more vulnerable users when required.

## Thermostatic valve

Contains a temperature sensitive wax cartridge that maintains the water temperature to within +/-1 degree ensuring that the temperature and pressure is automatically controlled, preventing cold water shock or hot water scalding.

## Three hole mixers

These mixers have a spout with separate hot and cold valves/levers/handles and fit on to three tap hole basins, baths and bidets.

## Topfix

An innovative feature that allows the mixer to be fitted from above the basin. This avoids the difficulty of tightening the fitting in the awkward space beneath the basin, simplifying and speeding up installation time. For further information please refer to page 6.

## Twin flow

Even when water pressure is not balanced, Ideal Standard's twin flow fittings provide solutions for bath and basin. They allow a cold supply direct from the mains, while the hot supply can be furnished from low pressure storage.

## Unvented hot water system

Provide hot and cold water at mains pressure (greater than 1bar) meaning that 'High Pressure' fittings can be used. Unvented hot water systems give much higher hot water flow rates than traditionally UK gravity fed systems. These systems are easily identified by a pressure vessel on top of the hot water tank, and a lack of cold water feeder tank (usually in the loft).

## Valve

A mechanism that controls the flow of water via a handle.

Installation  
made easy  
with Topfix

## Flow rate explained

As consumers we all know from experience how disappointing it is when a product does not meet expectation. As a manufacturer Ideal Standard places much emphasis on performance of its mixers, taps and showers and actively encourages comparison of flow rates to allow prospective customers to select a product which is both compatible with their domestic hot water system and meets their needs.

**Taps and Mixers  
Flow Rate Icon**

**Showers  
Flow Rate Icon**

In an effort to be visible and transparent we have created a quick icon for taps and showers which indicates the lowest recommended pressure required to achieve our target flow rate. This target flow rate is measured with any Eco flow regulator removed. Whilst higher pressures will obviously achieve a greater flow rate, in some circumstances the flow performance at lower pressures may still be considered satisfactory, such as when water saving is a consideration. The information provided allows the calculation of flow performance to be anticipated at any given pressure.

Flow rates on baths are really important as no one wants to wait 20 minutes for a bath to fill. BS EN 200 targets a bath filling rate of at least 15 litres per minute.

Shower flow rate is all about personal preference. In our experience no one would want to shower in less than 5 litres per minute. However, higher pressure will give a better showering experience. We also believe that a flow rate of 12 litres per minute will satisfy those who prefer a powerful shower without excessive water consumption. For that reason most of our showers have an integrated (removable) flow regulator.

We believe that filling a basin at 5 litres per minute gives the best balance between filling the basin and reducing water consumption when hand washing under running water. For that reason most of our basin mixers have an integrated 5 litre per minute flow regulator, which can be exchanged for a flow straightener (supplied) when very low pressure prevails.

Our factory fitted flow regulators are designed to help with compliance with many Eco water saving schemes, including the BMA Water Efficiency Product Labelling Scheme (WEPLS), the Code for Sustainable Homes (CoSH) and BREEAM.

**BRASSWARE BOOK**

Academy

Designed by Seymour Powell, Academy is an elegant range of mixers and taps. Inspired by architectural forms, the range is highly ergonomic with smooth soft shapes that are a pleasure to touch. The distinctive conical handle is integrated into the whole, making the spout the visual focus. Patented Topfix installation feature to make installation faster and simpler by allowing mixers to be fitted from above the basin.

Ceramix Blue...  
Blue is the new Green

Ceramix Blue is a cleverly designed and precision manufactured range that helps reduce water consumption without compromising on performance or reliability. A host of features have been developed to ensure a greater level of environmental responsibility and a revolution in water hygiene.

Water is never in contact with the brass body, as it passes through waterways made of special plastics and hoses made from specific nickel and lead-free materials.

- Single lever basin mixer available in standard (with and without pop-up waste) and hand rinse formats
- Features 40mm high flow ceramic disc cartridge suitable for high and low water pressure systems
- Safer 'Cool Body' operation - also with hot water limit stop
- Pre-fitted with a 5 litre per minute aerated flow regulator to ensure compliance with water saving legislation (flow straightener supplied for low pressure systems)
- IdealPure® provides 'lead and nickel free' waterways - to meet the new World Health Organisation guidelines for drinking water
- 5 Year Guarantee

- High flow performance thermostatic bath filler available to comply with Part G/Code for Sustainable Homes for safer bathing
- Bath shower mixer with Idealrain shower set also available
- In addition to the benefits of thermostatic protection, Cool Body ensures daily safety for all the family thanks to Ideal Standard's revolutionary design, the surface will not get hot. Also the bath filler and bath shower mixer are equipped with a hot water temperature limiter to prevent scalding
- 5 Year Guarantee

Ceramix Blue

Ceramix Blue mixers and taps feature revolutionary new technology. The innovative fittings save water and energy costs, helping to save you money as well as being environmentally friendly. The bath filler and bath shower mixers are safe for all the family with their thermostatic control, and cool body features, and are designed to give excellent flow rates at low pressure. In addition, the IdealPure technology on the basin mixers provides safe drinking water.

# BLUE

## Save water, save money with innovative BLUE technology

A new generation in water efficiency - Concept, Active and Ceramix Blue. With its intelligent design and precision engineering, the Blue collection perfectly balances your need to reduce water consumption with safety and control. The innovative basin fittings are specially engineered to use less water so reducing your energy costs. Efficiency that brings real savings to your home! In addition to this some of the bath fillers and bath shower mixers include state-of-the art thermostatic controls ensuring your family stays safe at all times.

### A revolution in efficiency

The Blue basin mixers are engineered to use less water and energy thanks to features like the flow regulator and the fact that less water is held in the tap when it is off. And by saving energy and water, it saves you money.

### IdealPure®

Another first from Ideal Standard, our IdealPure® technology, the first of its kind, gives you nickel and lead-free waterways. Waterways are made from special plastics ensuring water never makes contact with any metals and that means clean safe water, every time.

**Those savings add up fast... up to £174 a year\***

\* Family based on household of four people using a single basin fitting. Average water price: £1.77/m³. Average energy price 7.23p per kWh. Assumes water is heated by natural gas and basin mixer is installed without an aerator. Based on industry average. Correct at time of going to press.

## Concept

Concept mixers and taps feature revolutionary new technology. The innovative basin fittings save water and energy costs, helping to save you money as well as being environmentally friendly. In addition, the IdealPure technology on the basin mixers provides safe drinking water, with no brass or chrome plated parts in contact with water.

For the Bath - Multiplex Trio

Multiplex Trio is a new concept in bath filling. The fittings may be mounted on or around the bath or on the wall, independently of the filter, without the need for a conventional spout. The water comes from the combined filler and overflow. This enables you to turn the water on and off from a convenient place without having to stretch around a shower screen or alcove.

Retail Price inc VAT (20%)

Multiplex Bath Pop Up Waste and Overflow

K8029AA	Chromed handle and domed plug	£120.07
---------	-------------------------------	---------

For the Bath - Idealfill

Idealfill is a low pressure product and will work with the majority of domestic systems delivering 23 litres of water per minute - faster than any other bath filling system. The fittings may be mounted on or around the bath or on the wall, independently of the filter, without the need for a conventional spout. The water comes from the combined filler and overflow. This enables you to turn the water on and off from a convenient place without having to stretch around a shower screen or alcove.

Flow Regulators

Fitting a water regulator allows you to control the amount of water a tap uses. Water usage is determined by water pressure and the size of valve in the tap. So where you have particularly high pressure a tap could be delivering many unnecessary litres of water per minute. Our mixer tap regulator is designed to give you a maximum of 5 litres of water per minute up to a pressure of 3 bar. The regulator is screwed onto the tap outlet and has an airated nozzle. This gives the user a fine airated spray of water - both softer to the hand and perfect for quickly lathering with soap.

**BRASSWARE BOOK**

## ALTO EV Thermostatic exposed shower mixer with single function shower kit

Designed to be installed on UK low pressure gravity fed stored hot water systems (minimum 0.1 bar), and high pressure systems (maximum 5 bar) including unvented, modulating instantaneous water heaters, modulating combination boilers and pumped systems.

### QUICK AND EASY TO INSTALL

#### Step One

Use template to check pipe positioning

#### Step Two

Mark and drill fixing holes for wall brackets

#### Step Three

Fit wall brackets onto pipes then fix mixer

#### Step Four

Check for leaks and attach hose

# Fast-fix bracket

## What makes our bar valves different from the rest?

### The Fast-fix bracket

The competitor's fixing brackets fit inside the wall so require internal access during their installation. And if their valve is to be mounted on a solid wall then more channelling out is required for the bracket, along with extensive making good. The Alto Ecotherm attaches to the outside of the wall, offering a number of advantages:

- No requirement for internal access
- A more robust fixing
- No making good required
- All water connections are external (so less damage should water leaks occur, and much easier to fix)
- The bar valve sits no further from the wall than those with domed pipe covers

Alto Ecotherm exposed shower mixer and fixing bracket

### Alto Ecotherm

The Alto Ecotherm Thermostatic Bar Shower Valve and Bath Shower mixers are affordable and built to last. An innovative fast-fix bracket ensures robust installation and an Eco Button helps reduce water usage and meet the requirements of the code for sustainable homes.

- Designed for low pressure gravity hot water systems (<0.3bar)
- Automatic safety shutdown

CONCEPT  
EASYBOX SLIM  
GERMAN  
ENGINEERING  
WITH IDEAL  
TECHNOLOGY

Concept Easybox slim is a proven thermostatic shower mixer system that does exactly what it's name suggests: Installation is simple and it's unique shallow design makes it ideal for modern wall cavities.

The unique box housing ensures superior water tightness, and flow performance is assured by the ecramic disc control. Prioritising safety, the separate temperature control includes a built-in safety stop feature.

Faceplate

Superior chromed metal faceplate with separate flow and temperature controls and recommended 40°C position for safe showering.

Watertight

Water-tight solid brass body construction for durability.

Thermostatic cartridge

Proven thermostatic cartridge and flow control as used on many other Ideal Standard showers to ensure trouble free operation

Thread inlet

Threaded inlet connections rotate for easier connection.

Outer plastic sealing box

Outer plastic sealing box gives increased strength and durability. It also has double sealing for superior water-tightness and to greatly reduce the possibility of leakage, which is a significant issue for built-in mixers.

Sealing at the front is achieved using a plastic lid which has tapered seals to the main box and around the 2 handles. A waterproof membrane sheet is also included. The outer chromed metal faceplate is not a sealed item and can easily be removed for cleaning or servicing.

Versatile mounting bracket

Versatile mounting bracket (supplied) can be fitted to any of the 4 sides and fixed onto a cross bearer or upright in a cavity wall.

Adjustable legs available as an option for fixing to an uneven brick wall, or for panel or front mounting.

## Fits into a 43mm cavity

- Ultra slim profile
- Fits into a 43mm cavity with 15mm plasterboard
- Total depth of 58mm
- Installation will include tiles and adhesive
- Minimum built-in depth of Easybox 58mm
- Hence it will fit into shallow wall cavities found in modern UK houses

## Benefits to the installer

- The mounting bracket can be fitted to any of the 4 sides and fixed onto a cross bearer or upright in a cavity wall
- The variety of fixing methods
- The plaster guard to protect the mixer during installation and its integral spirit level lugs
- The integral seals on the sealing plate meaning there is no need to use sealant (as required with other similar built-in fittings)

## Quick and easy to install

1. Fix the mixer body into position and connect pipework.
2. Make good the wall by plastering around the mixer up to the plaster guard.
3. Place the tiling template over the plaster guard.
4. Tile the wall.
5. Trim back the tiling template.
6. Fix the sealing plate.
7. Fix the faceplate.
8. Attach the handles

## Concept Easybox Slim NEW

Designed to fit into a 43mm cavity, our latest thermostatic mixer is quick and easy to install. Available as a shower or bath shower mixer, with either a round or square faceplate, it is the perfect choice for your bathroom.

# The TT Shower Mixer

Although it looks like a complicated piece of engineering, the TT Mixer has actually been designed to be beautifully simple. It uses just the one cartridge, which also means fewer moving parts and easier maintenance. We've made the non-return valves reversible, so you don't have to re-plumb if the hot and cold supply pipes have been incorrectly installed, saving time and money. The TT Mixer has only one mixed outlet connection, is suitable for rising or falling pipe-work and can be installed vertically or horizontally. It is suitable for all hot water systems from 0.1 bar to 5.0 bar.

## A watertight argument for fitting the TT valve system.

Everyone's doing their bathroom up these days. And while classic plain white tiles are still in fashion, more and more of us are using hand-crafted tiles and beautiful mosaics sourced from specialist shops. Trouble is, although they look beautiful they tend to have uneven surfaces. Put that together with the fact that a lot more houses and flats have stud partition walls, and you'll see why there's an increasing demand for watertight sealing. To answer this demand, the TT Mixer and face plates have been constructed with a twin sealing system:

### Sealing system one

- This is a conventional foam seal which is incorporated into the sealing plate
- When the sealing plate is screwed into the valve the seal is compressed and forms a flexible seal over uneven surfaces

### Sealing system two

- This seal is a flexible rubber gasket, incorporating fins designed to fit into the tilting trim surrounding the mixer in the wall
- The purpose of this gasket is to provide an additional seal against water penetration

## A step by step guide to installing the TT Mixer

1. Fix the mixer body into position and connect the pipework.

2. Make good the wall by plastering around the mixer up to the plaster guard.

3. Place the tiling template over the plaster guard.

4. Tile the wall.

5. Trim back the tiling template.

6. Fit the sealing plate.

7. Fix the face plate.

8. Attach the handles.

TT Active

The Active collection offers an extensive range of options for the bathroom, shower or kitchen. It's stunning design effortlessly mixes the stylish radial profiles of the lever and spout with the smooth soft outline of a cylindrical body. The Active collection offers a range of choices to suit every individual need.

Idealrain

Idealrain is a range of shower kits and fixed overhead rain showers. With a sleek, modern design, the range offers excellent performance at an affordable price. The range includes four sizes of hand spray, seven shower kits, three shower sets and three sizes of rain showers, all with a superior flow rate. The new shower kits are suitable for use with a wide range of shower valves and work well with water pressure systems as low as 0.1 bar.

Easy to use. Easy to love.

The unique fin handle is soft and ergonomic, offering total control: change the spray with just a touch of your thumb. And because it's totally integrated with no joints or overhang, it's easy to clean... just like the flexible rubber nozzles.

From simple handsprays in a variety of sizes, to shower kits to rain showers, Idealrain offers a range of choices to suit any bathroom and any need.

Four different sizes, from a compact 80mm to a generous 140mm mean you can enjoy exactly the shower you want with Idealrain.

Idealrain is available in both single and multifunction versions. Multifunction offers three spray choices to match your mood: Saturate, Invigorate and Concentrate.

Rain shower

Wall or ceiling-mounted, a luxurious rain shower head gives you complete freedom to match your bathroom, your personality and your mood... and a sense of well-being every time you step into the shower.

- i S1 100mm rain shower with angled arm
- ii M1 200mm rain shower with horizontal arm
- iii L1 300mm rain shower with vertical arm

Idealrain

A range of sleek modern shower kits offering excellent performance at an affordable price.

Idealrain Pro

Idealrain Pro is a heavy-duty addition to the Idealrain showering family. Sleek handsets held by metal brackets run on durable sliding rails to create a system that, like its new range of rainshower heads, has been developed to meet the demands of non-residential buildings. The ultimate showering solution for hotels, health clubs and leisure facilities is here.

1. Robust high strength metal wall fixing brackets.
2. Reinforced metal sliding rail in 2 sizes (600mm and 900mm).
3. Single or 3 function anti-scale shower heads available in 3 different sizes
4. Single function handsets incorporate hygienic anti-aerosol function
5. Heavy-duty ratchet mechanism.
6. Durable metal handset bracket with easy grip control.
7. Smooth ultra flexible shower hose.
8. Water saving flow regulators provided as standard.

Idealrain Pro Square Rainshower

Idealrain Pro NEW

Exceptional structural integrity and long term reliability are fundamental to Idealrain Pro. Non-residential buildings will benefit from its unique combination of performance and elegance, making it an excellent specification choice when resistance to harsh or careless treatment is required.

# CERAMIX BLUE

Save water, save money with innovative BLUE technology

The Ceramix Blue Kitchen Mixer is a cleverly designed to help reduce water consumption without compromising on performance or reliability. A host of features have been developed to ensure a greater level of environmental responsibility and a revolution in water hygiene.

**By saving energy and water you also save money on your household bills...often in excess of £174 a year\***

- Features 40mm high flow ceramic disc cartridge suitable for high and low water pressure systems
- Safer 'Cool Body' operation - also with hot water limit stop
- Pre-fitted with a 5 litre per minute aerated flow regulator to ensure compliance with water saving legislation (flow straightener supplied for low pressure systems)
- IdealPure® provides 'lead and nickel free' waterways - to meet the new World Health Organisation guidelines for drinking water
- 5 Year Guarantee

## IdealPure®

Another first from Ideal Standard, our IdealPure® technology, the first of its kind, gives you nickel and lead-free waterways. Waterways are made from special plastics ensuring water never makes contact with any metals and that means clean safe water, every time.

\* Family based on household of four people using a single basin fitting. Kitchen fitting will often give greater savings as the usage is higher. Assumes water is heated by natural gas with an average energy price of 7.23p per kWh, average water price is £1.77/m. Based on industry average. Correct at time of going to press.

## Ceramix Blue

Ceramix Blue features revolutionary new technology. The innovative fittings save water and energy costs, helping to save you money as well as being environmentally friendly. They are designed to give excellent flow rates at low pressure. In addition, the IdealPure technology on the sink mixer provides safe drinking water.

# NEW Markwik with Armitage Bioguard Technology

Armitage Shanks

**"Pseudomonas aeruginosa is the definition of a tough bacterial strain, able to survive in the most harsh of environments. It is found widely in soil and stagnant water, can infect humans and represents a genuine threat to the most vulnerable hospital patients."**

(BBC News Health, October 2012).

Pseudomonas can be found in healthcare water systems, where it typically colonises in the last 2 metres of the water supply, close to the outlet itself.

## The NEW Armitage Bioguard Outlet

Developed with the help of leading healthcare professionals, this simple yet effective outlet is available for new installations, but can also be retro-fitted to existing Markwik 21 mixers, making it a quick and easy way to reduce your risks in the area where it is needed most.

Over many years, Armitage Shanks has designed and refined products specific to the healthcare market and has become the UK market leader in healthcare sanitaryware products and systems. The latest development is in response to the Northern Ireland taps report, the conclusions of which focused on tap outlets.

The new Armitage Bioguard outlet reduces the opportunity for bio film attachment and is lined with anti-microbial copper.

Easily retro-fitted to existing Markwik 21 mixers.

NEW CODE	OLD CODE	NEW DESCRIPTION
F960847AA		Markwik 21 Armitage Bioguard retro fit outlet
A6060AA	A4553AA	Markwik 21 Thermostatic Wall Mounted Sequential lever mixer with Armitage Bioguard
A6061AA	A4554AA	Markwik 21 Thermostatic Wall Mounted Electronic Proximity mixer with Armitage Bioguard
A6062AA	A4555AA	Markwik 21 Thermostatic Wall Mounted Time Flow mixer with Armitage Bioguard
A6063AA	A4803AA	Markwik 21 Thermostatic Deck Mounted mixer with Armitage Bioguard

## Markwik 21

Markwik 21 with Insulate technology, ensures that the exterior of the fitting remains cooler even after long periods of use. An integral thermostat provides safe warm water and avoids the typical deadlegs between the thermostat and mixer found in traditional assemblies.

## Sensorflow 21

The demand for hygiene and performance is met by a range of hands-free electronic taps second to none. Remote sensors detect a users presence at the basin and control water flow to ensure that it is only released when required.

Up to 6 mixers can be linked together running off 1 transformer unit. Mains mixers come with a transformer. Link mixers do not have a transformer but are linked to the mains version. Battery mixers are run as solus installations and cannot be linked together.

Product example	Code and description	Number of taps in run										Price
		1	2	3	4	5	6	7	8	9	10	
Sensorflow 21 - 15cm compact wall spout	A4846AA Mains spout	1	1	1	1	1	1	2	2	2	2	£437.58 each
Sensorflow 21 - 15cm compact wall spout	A4847AA Link spout	0	1	2	3	4	5	5	6	7	8	£373.52 each
Sensorflow 21 - 15cm compact wall spout	A4845AA Battery	N/A										£371.94 each

## terms and conditions

### Order Procedure

Orders for products within this book can be placed via EDI (Electronic Data Interchange), email, telephone or fax using the contact details below:

Brassware Sales:	<b>T: 0870 129 6010</b> <b>F: 0800 590 943</b>
Contract Sales:	<b>T: 01543 413311</b> <b>F: 01543 492216</b>
E-Mail Address	<b>thebrasswarebooksales@idealstandard.com</b>

NB: All contract sales orders must be scheduled accordingly and placed via the Contract sales number above.

<b>Sales Office opening hours:</b>	<b>Monday – Thursday:</b>	<b>8.00am – 5.00pm</b>
	<b>Friday:</b>	<b>8.00am – 4.30pm</b>

<b>Contract Sales Office opening hours:</b>	<b>Monday – Tuesday:</b>	<b>8.30am – 5.00pm</b>
	<b>Wednesday – Thursday:</b>	<b>8.30am – 4.45pm</b>
	<b>Friday:</b>	<b>8.30am – 4.30pm</b>

### Next day delivery

Fittings (excluding non-residential ranges) are available for next day delivery. Place your **fittings only** orders by 2pm and you will automatically receive 24hr delivery.

Please note that where your orders contain fittings as well as our other categories, your normal delivery schedule will apply, unless you indicate that you wish to receive your fittings within 24 hours.

### Delivery Charges

Any orders under £65.00 at your cost will be subject to a standard delivery charge of £6.00 per delivery. Saturday deliveries will be subject to a £35.00 delivery charge. All delivery charges will be invoiced along with the products ordered.

### Returns Policy

Our restocking charge is 25% of the value of your order (excluding delivery) and the cost of transport and administration. The product must meet the following criteria to be eligible for return:

- Current product i.e. not announced for withdrawal
- Re-saleable condition (boxed)
- Must have been delivered in the last 14 days

Please quote your delivery or invoice number when calling us to process a return.

Ideal Standard pursues a policy of continuing improvement in design and performance of its products. The right is therefore reserved to vary specifications without notice.

All prices are correct at the time of going to print. Errors and omissions excepted.

# Ideal Standard taps, mixers and showers Guarantee

Our confidence in the quality and reliability of Ideal Standard products enables us to guarantee all taps, mixers and showers for five years from date of purchase. Parts are guaranteed for five years and will be replaced if found to be faulty. The guarantee does not cover general wear and tear.

Our guarantee covers all products that have been used in the manner they were intended, and does not apply to any products that have been misused or abused in any way. Products must be installed and cared for in line with our fixing instructions and local water byelaws. The guarantee covers products in domestic use by the consumer and not in commercial or business use.

In the unlikely event the product fails within five years, we offer a free replacement or replacement part (or nearest equivalent). Liability is limited to individual products and does not cover consequential loss or damage on installations.

Applies to UK and Republic of Ireland only. This guarantee does not affect your statutory rights.

If you need installation advice, a qualified plumber will be happy to help you. We recommend you choose one who is a member of one of these professional bodies:

### Association of Plumbing and Heating Contractors (APHC)

[www.aphc.co.uk](http://www.aphc.co.uk)  
Tel: **0121 711 5030**

### The Chartered Institute of Plumbing and Heating Engineering

[www.ciphe.org.uk](http://www.ciphe.org.uk)  
Tel: **01708 472791**

### Scottish and Northern Ireland Plumbing Employers' Federation

[www.snipef.org.uk](http://www.snipef.org.uk)  
Tel: **0131 556 0600**

### Water Industry Approved Plumber Scheme

[www.wras.co.uk/wiaps](http://www.wras.co.uk/wiaps)  
Tel: **01495 248454**
